Titan™ Rollbag Machine
Bags-On-A-Roll

Titan™ 555
Semi-Automatic Rollbag Machine

Simple and efficient, this semi-automatic bag filling and sealing machine quickly pays for itself with the increase in production. Utilizing a wide variety of Bags-On-A-Roll, this machine offers a vast improvement over any hand filling approach. The Titan™ 555 operation begins by manually pulling a bag into position where it is blown open and ready to be filled. Once filled with candy, small parts, nuts or any number of products, the bag is manually torn at the perforation and placed under the seal jaw. An electronic foot pedal activates the seal jaw producing a neatly sealed bag every time. When choosing a low cost, high value bagger, the Titan™ 555 tabletop is your best choice.

Standard Features and Benefits for Titan™ 555

- Electrically powered seal jaw
- Manual bag advance
- Adjustable rotary switch for seal/dwell control
- Seal cycle activated by foot switch
- Processing speeds of up to 15 bags per minute

Specifications:	Titan™ 555
Seal Length:	12"
Seal Width:	1/8"
Electrical:	None required
Min. Bag Size	2" x 2"
Max. Bag Size	12" x 12"
Max. Bag Thickness	4 mil
Options:	
- Accumulating work area and adjustable funnel assembly	- Spare parts kit
- Console stand	
- Multi-roll option
