

# Measuring Twist Tie Length

How to measure what size opening, of our Auto Twist Tie Machine, you will need for the product you are closing.

- 1) Apply a twist tie (or a thin strip of paper or whatever you have on hand) and wrap it around the product you want tied. For example (Picture 1) a finger is wrapped with a twist tie. ***(Please do not insert your finger into an auto twist tie machine)***

- 2) Remove the twist tie from the product and twist it back up without the product. From there, measure the diameter of the twist tie as show (Picture 2).

***Result: This example demonstrates a 5/8" capacity***
