

PMS Color Chart

Use this guide to assist your color selection.

This chart is a reference guide only. Pantone colors on computer screens may vary based on the graphics card and monitor used in your system.

Ink colors can vary due to humidity, where the samples are pulled during a print run, the color of film (plastic) the job is printed on, screens or tints in the artwork, trapping, and other factors.

Due to personal opinion & expectation the ink colors can be right on or they may be not very close to what you were expecting.

International Plastics prides itself on many factors and we will do our best to accommodate your wishes in any way we can, but there are many factors that can influence a print job that you have entrusted us with.

We will do what we can to help you achieve your expectations.

FLUORESCENT
(Fluorescent colors do not show on your monitor as they actually print due to the make up of the ink.)
 (Be aware that printing fluorescent inks cost more than regular PMS inks or metallic inks)
